Why does my printer keep flashing

Are you troubled by the HP printer light blinking problem and you don't know how to fix that problem? If yes, then you have opened up the right link as here you will get to know how to fix the HP printer light blinking error. All those who want to know how this error arises and how it can get fixed need to read this article very carefully. The lights flashing on your printer device is a response given by the printer machine to the command that you have given to it. The flashing or blinking of lights is completely dependent on the working status of your printer device. How to Fix HP Printer All Lights Blinking Issue? In case such an error occurs, then you will see that all the Control Panel lights are blinking. The attention light, the power light, check black ink cartridge light, and color ink cartridge light starts blinking at once. These lights begin to blink because the printer device is in an error state. Resetting your printer device is the best solution to fix this problem. Below mentioned are the steps that you need to carry out in order to reset your HP printer. Step 1: First of all, you need to disconnect the power wire from the rear of the printer. Step 2: Then, you need to disconnect it from the power source. Step 3: After that, you need to wait for a period of 15 minutes. Step 4: Connect the power wire to the electrical outlet and then connect it to your printer device. Step 5: Once all this is done, then power on your printer device. How to Fix the HP Printer Light Blinking Error? Mentioned below are the steps that you need to carry out in order to fix the HP printer light blinking error. Step 1: Take out the ink cartridges from your HP printer device. Step 2: Disconnect the power wire from the side of your printer. Also, disconnect the power wire from the electrical outlet. Step 3: After that, disconnect the USB wire if you are using one. Step 4: Now, wait for a few seconds to press the power button n your printer device. Step 5: Then, reconnect the power wire to the electrical outlet and then reconnect it to your HP printer device. Step 6: After that, power on your HP printer device and wait for your printer to begin printing. Step 7: See if the lights are flashing or not. If the lights stop blinking, then that means the problem is fixed. In case the issue is still appearing and you don't understand why this is happening, then you must troubleshoot the problem by downloading and installing the HP Scan Doctor driver. In case your problem does not get resolved by applying the solution above, then you must take assistance from the technicians and experts. Once you tell them your problem, they will surely help you fix it. So, this is all you need to know about how to fix the HP printer light blinking error. You can often diagnose problems with your product by checking its lights. Lights 1 WiFi 2 power 3 paper 4 ink Light status Condition/solution The power light is on The product is turned on. The power light is flashing The product is busy. Wait for the power light to stop flashing before turning off the product. If you just replaced an ink cartridge and the power light is still flashing after 3 minutes, the cartridge may be installed incorrectly. Reinstall the ink cartridge. The power light is flashing The paper light is flashing Paper is jammed in the product. Remove the jammed paper, and press the B&W copy button or the color copy button to clear the error. The power light is flashing The paper light is on No paper is loaded or multiple sheets fed at one time. Load paper in the product, and press the B&W copy button or the color copy button to clear the error. The power light is on or flashing The ink light is flashing Ink in a cartridge is low. You can continue printing, or check which cartridge is low and replace it. The power light is on or flashing The ink light is on An ink cartridge is expended or not installed correctly. Replace or reinstall the cartridge. (Depending on the color of the expended cartridge and how you are printing, you may be able to continue printing temporarily.) The power light is on or flashing The ink light is flashing The paper light is flashing The ink pads are near the end of their service life. Contact Epson for support. Connect your product using a USB cable and try updating the firmware again. If the error message continues, contact Epson for support. The power light is flashing The ink light is flashing The paper light is flashing The WiFi light is flashing A printer error has occurred. Turn the product off and then back on again. If the error continues, check for a paper jam. If the error persists, contact Epson for support. The WiFi light is flashing orange WiFi connection error. Press the Wi-Fi button on the printer to clear the error and try again. Note: The ink pads in the printer collect, distribute, and contain the ink that is not used on printed pages. During the life of your product it may reach a condition where either satisfactory print quality cannot be maintained or the ink pads have reached the end of their usable life. The Epson Status Monitor, your LCD screen, or lights on the control panel will advise you when these parts need replacing. If this happens during the standard warranty of the product, the exchange of the product or replacement of the pads is covered under the standard warranty. If the product is out of warranty, the pads can be replaced by any Epson authorized service provider. The waste ink pads are not a user-replaceable part. Is your HP printer flashing and you don’t know what to do to solve the problem? Then, read this article as we discuss solutions to the most common HP printer blinking problems.What Does Blinking Light on HP Printer Mean [Answer]The blinking lights on your HP printer could mean several things. Where your HP printer is flashing lights will help you determine what the flashing lights mean. So, you have to take note of the place where the lights are coming from. This will help you to answer the question “Why is my HP printer blinking?”In this article, we will discuss the most common places where an HP printer flashes light, what the flashing lights mean, and how to solve the issue.How to Fix HP Printer Flashing All LightsDo the following solutions if your HP printer is flashing all its lights:1. Reset Your PrinterHow to Reset HP PrinterDo the following to reset your HP printer:Step 1: Ensure the printer is turned on, then unplug the power cable out of the machine.Step 2: Wait for about 30 seconds or so.Step 3: Plug the cable back to the machine and then press its power key to switch it back on.Step 4: You would be sure the reset is complete once the light on the power button stops blinking.If the HP printer keeps flashing lights then go to the next solution. If it doesn’t, don’t continue troubleshooting since the problem has been solved.2. Do A Power DrainHow to Power Drain An HP PrinterDo the following to power drain your HP printer:Step 1: Take the ink or toner cartridges out of your printer.Step 2: Ensure the printer is turned on, then detach the power cord out of the machine.Step 3: If a USB cable is connected to your printer, remove it.Step 4: Wait for some minutes; about 2 to 3 minutes. After that, press down the printer’s power button for 30 seconds.Step 5: Plug the printer’s power cable directly into the wall socket; do not plug it into an extension socket or a surge protector.Step 6: Now, plug the cord back into your printer.Step 7: Turn the printer back on. Wait for the printer to finish warming up and get idle.3. Check The Printer’s Control Panel Overlay and Ensure It is Properly InstalledIf the overlay has been previously installed, then you don’t have to reinstall it. Instead, press the overlay firmly. This would ensure the overlay’s pins or adhesive gets properly installed.If you were yet to set up the overlay, simply do the steps below.How to Properly Install HP Printer Control Panel OverlayDo the following to install your HP printer control panel overlay properly:Step 1: Detach the power cable from the machine.Step 2: Find the overlay, then peel the backing on it off. This would expose the overlay’s adhesive.Step 3: Take the lid of the scanner up.Step 4: Line the overlay carefully and install it.Step 5: Plug the cord back to the printer.If your HP printer won’t stop flashing lights after you have done all the solutions above, then contact HP Support for further assistance.HP printer 2540 all lights flashing issue can be resolved with the solutions above.How to Fix HP Printer Flashing E Error Codes Do the following solutions based on the error code you received to solve your HP printer problem.Why Is My HP Printer Flashing E0 [Answer & Solution]Your HP printer is displaying an E0 error code because one or more of its ink cartridges is incompatible, missing, damaged, incorrectly installed, or faulty.Depending on the reason for the error, you may have to reinstall the cartridge, clean its contacts, or replace the cartridge altogether.The ink cartridge below is compatible with the following HP printers: HP OfficeJet 8600, OfficeJet Pro 251dw, 276dw, 8100, 8610, 8620, and 8630 Series.Click Here to Buy Yours Now!Why is MY HP Printer Flashing E2 or E1 [Answer & Solutions]Your HP printer will flash or display an E2 or E1 error code if the loaded paper size and the size setting don’t match.When this happens, you have to either adjust the paper size setting to match the size loaded or put papers that matches the size in the setting.How to Fix HP Printer Flashing E3An E3 code is an indication of a carriage jam. To solve this problem, do the following:1. Check Your Machine’s Carriage Path for ObstructionsHow to Check HP Printer Carriage Path for ObstructionsDo the following steps to check your HP printer carriage path for obstructions:Step 1: Ensure the printer is turned on, and then detach the power cable from the machine.Step 2: For printers with batteries, take out the battery at this point.Step 3: Lift or open the machine’s carriage door so you can get to the carriage.Step 4: Check the path to see if debris like dislodged labels or any crumpled paper is blocking it. If you find any debris, ensure to take them out completely.Step 5: Ensure the carriage’s latch is properly closed (if yours has a latch).Step 6: Now, try moving the carriage from the left to the right. Ensure it is moving freely. If it isn’t, then continue with the troubleshooting.Step 7: Shut the door, plug the power cable into the printer then switch it back on.2. Reset Your PrinterFollow the steps in the “How to Reset HP Printer” section of this article to reset your printer.If the problem persists after the reset is complete, then contact HP Support for further assistance.How to Fix HP Printer Flashing E4 An e4 error code means there is a paper jam issue. Do the solutions below to solve the error.1. Remove the Jam AutomaticallyTo remove the jam automatically, simply press your cancel key. If this doesn’t solve the problem, go to the next solution.2. Remove the Jam ManuallyThere are several places in the printer that a paper jam can happen in. Do the following steps to remove paper jams in these places.i. Cartridge AccessHow to Manually Remove Paper Jam in HP Printer Cartridge AccessDo these steps to manually remove a paper jam from your HP printer cartridge access:Step 1: If necessary, push the printer’s output tray in.Step 2: Raise the cartridge door.Step 3: Wait for some seconds for the carriage to become silent and idle.Step 4: Ensure the printer is turned on and then detach the power cable from the machine. If you do not disconnect the cord before you reach into the printer, you may receive an electric shock or get injured.Step 5: Now, check the cartridge access space to see if any object is stuck there. Move the carriage back and forth to check this.Step 6: Behind the access area, you will find a paper path cover.Step 7: Pinch the two tabs together then lift. This would remove the path cover.Step 8: Check inside the machine for jammed paper. If you find any, grab the paper with your hands and firmly but slowly pull it towards you.Step 9: Check the duplex rollers for a flip gate, using your fingers, lift it.Step 10: Now, also check underneath this gate for jammed papers.Step 11: Return the gate to its position by pressing it down. Ensure it snaps in place.Step 12: Also, put your paper path cover in its position and ensure it is seated well. To do this, pinch the two tabs together, then slide the path cover back, press it down and ensure it locks in place.Step 13: Close the cartridge door. If it refuses to close fully, then you did not properly insert the paper path cover.Step 14: Pull your output tray then raise the tray extender.Step 15: Connect the power cable back to the printer, then turn it back on.Do a print job to see if the paper jam error has been fixed.ii. Cleanout and Input Tray AreasHow to Manually Remove Paper Jam in HP Printer Cleanout and Input Tray AreasDo these steps to manually remove a paper jam from your HP printer cleanout and input tray areas:Step 1: Lift or open the printer’s input tray.Step 2: Pull the output tray then remove the papers in the tray.Step 3: Check inside the area for any stuck paper or item. Make use of a flashlight if you can’t see the inside well.Step 4: Switch the printer off, disconnect cords attached to it like a USB cable. Disconnect the power cable from the printer as well.Step 5: Hold the printer’s top firmly and then turn it sideways. To get access to the cleanout, pull your input tray.Step 6: To get a better view of the area, tilt the machine down 10-20 degrees. Now check for debris or stuck paper. If any is found, pull it out, do this gently so the paper doesn’t tear.Step 7: Check the pickup rollers for torn paper. If you find any, is found, remove it.Step 8: Put the printer back in its usual position.Step 9: Load paper in the paper tray.Print any document to see if the problem has been resolved.Check out this HP multipurpose printer paper below.Click Here to Buy Yours Now!iii. Document FeederHow to Manually Remove Paper Jam in HP Printer Document FeederDo these steps to manually remove a paper jam from your HP printer document feeder:Step 1: Lift the document feeder cover.Step 2: Check for and pull out any stuck paper in the rollers. The paper can get torn while you’re removing it, in which case, you need to check the wheels and rollers for paper pieces. If remnants are not removed, it may cause paper jam errors down the road.Step 3: Close the cover by pressing it down; ensure it snaps in place.Step 4: Press your cancel key to erase the error.Print any document to see if the problem has been solved. If it hasn’t, then do the next solution.Watch this instructional video for more information on how to manually remove a paper jam from your HP printer.3. Clean Your Paper Feed RollersIf debris such as paper fiber or dust builds up on and around the printer’s paper feed rollers, it may result in a paper jam issue.To solve the issue, you need to clean the areas where debris can collect.I. Cartridge Access RollersHow to Clean HP Printer Cartridge Access RollersDo the steps below to clean your HP printer cartridge access rollers:Step 1: Switch the printer off, then disconnect its power cable.Step 2: If necessary, push the printer’s output tray in.Step 3: Raise the cartridge door.Step 4: Get a clean cloth (ensure it is lint-free), then lightly dampen it with water. Squeeze the cloth to remove excess liquid.Step 5: Place the dampened cloth on the rollers and press it. Use your fingers to roll the rollers. You can apply more pressure (don’t use too much pressure) to clean off dirt or dust buildup.Step 6: Wait for some minutes (between 10-15 minutes) so the rollers can get dry.Step 7: Behind the access area, you will find a paper path cover.Step 8: Pinch the two tabs together then lift. This would remove the path cover.Step 9: Repeat steps 4 to 6 for the paper path area.Step 10: Once the rollers are completely dry, put your paper path cover back in its position. . To do this, pinch the two tabs together, then slide the path cover back, press it down and ensure it locks in place.Step 11: Close the cartridge door.Step 12: Plug the power cable back to the printer, then turn it back on.Print any document to see if the problem has been resolved. If it hasn’t, continue to the next area.ii. The Rollers under The MachineHow to Locate the Rollers under your HP Printer and Clean themDo the steps below to locate the Rollers under your HP printer and clean them:Step 1: Switch the printer off, then disconnect its power cable.Step 2: Draw out your input tray, then remove the papers in it.Step 3: Hold the printer’s top firmly, and then turn it sideways to get access to the rollers.Step 4: Get a clean cloth (ensure it is lint-free), then lightly dampen it with water. Squeeze the cloth to remove excess liquid.Step 5: Place the dampened cloth on the rollers and press it. Use your fingers to roll the rollers. You can apply more pressure (don’t use too much pressure) to clean off dirt or dust buildup.Step 6: Wait for about 10 minutes so the rollers can get dry.Step 7: Slide your input tray back in and put the printer in an upright position.Step 8: Plug the power cable back to the printer, then turn it back on.Print any document to see if the problem has been resolved. If it hasn’t, continue to the next area.iii. The ADF RollersHow to Clean HP Printer ADF RollersDo the steps below to clean your HP printer ADF rollers:Step 1: Raise your printer’s ADF cover.Step 2: Check inside for any obstructions. Ensure nothing is blocking the engagement between the rollers and paper. Check properly as even the smallest paper piece can result in a paper feed problem.Step 3: Get a clean cloth (ensure it is lint-free) then lightly dampen it with water. Squeeze the cloth to remove excess liquid.Step 4: Use the dampened cloth to clean the separator pad and rollers.Step 5: Wait for about 10 minutes so the rollers can get dry.Step 6: Close your ADF cover.Print any document to see if the problem has been resolved. If it hasn’t, continue to the next solution.4. Reset Your PrinterIf the problem persists, then it may be a false error, meaning no paper is stuck anywhere. In this case, you have to reset your printer.Follow the steps in the “How to Reset HP Printer” section of this article to reset your printer.If the problem persists after you have done all the solutions discussed, then you have to call HP Support for further assistance.Check out this HP Color LaserJet Pro M479fdn Printer below if your printer is old and you would rather buy a new one instead of servicing the old one.Click Here to Buy Yours Now!How to Fix HP Printer Flashing E5An e5 error code indicates an error state in the printer’s scanner. This error will not disrupt printing as only the scanner is affected.To solve this error, simply reset your printer. Follow the steps in the “How to Reset HP Printer” section of this article to do this.If resetting the printer doesn’t resolve the error, then the printer has to be serviced. In which case, contact HP Support for further assistance.How to Fix HP Printer Flashing E6You will get an e6 error code when your printer has a general issue.You have to reset your printer to clear this error. Follow the steps in the “How to Reset HP Printer” section of this article to do this.Ensure your printer is connected directly to your electrical socket rather than a surge suppressor or power strip. If the problem doesn’t get resolved, then try another socket.If the issue isn’t resolved after you do the above, then the printer has to be serviced. In which case, contact HP Support for further assistance.How to Fix HP Printer Flashing E9An e9 error code means a problem was encountered when the printer firmware was being updated.How to Fix HP Printer E9 ErrorDo the solutions below to fix the HP printer e9 error:1. Redo your Wireless SetupHow to Do a Wireless Setup on HP PrinterDo the steps below to set up your HP printer wireless connection:Step 1: Ensure your computer and router are switched on. Ensure the computer is also linked to the wireless network that you wish to connect your printer to.Step 2: If you are yet to set up your printer, then do this: Turn the printer on, put in the inks, and load the paper tray. Also, ensure the printer is within the router range, it should also be near the computer.Step 3: You can secure the connection in three different ways; with HP Smart, WPS, and Wi-Fi Direct.With WPSSome routers don’t support WPS. So, if yours doesn’t, simply skip this and go to HP Smart.Step 1: Press your printer’s power and wireless buttons simultaneously and hold on to them for about 3 seconds.Step 2: Check your router for the WPS key. Now, press this button and on to it for about 3-5 seconds. The connection process should get started.Note: Your printer will search for available connections for 2 minutes after you press the wireless key. If you don’t press your router’s WPS key at this time, you would have to redo the steps to secure the connection.Once the connection is secured, your printer’s Wireless light will become solid.With HP SmartStep 1: Download the HP Smart from your App Store or Microsoft Store, depending on your system type. Next, install it.Step 2: Press your printer’s wireless key and hold on to it for about 3 seconds.Step 3: Open HP Smart on the computer. Now, click on the Plus symbol. The tool will start searching for available printers on the network.Step 4: Pick your printer from the list of available printers then “Continue”.Step 5: You will be asked to type in the network password (WPA key or WEP).Step 6: Once the connection is complete, click on “Continue” then “Exit Setup”.Wi-Fi DirectUse this option when the network is a guest one.Step 1: Turn on the Wi-Fi Direct by touching the following buttons: Information, Cancel, and Resume.Step 2: Open the settings of your computer’s Wi-Fi and then choose the printer.You can read this detailed guide on how to connect HP printer for more information.2. Press Your Printer’s Information KeyIf the printer prints the information page, then the problem has been fixed. If it doesn’t, then the printer is in its recovery mode.When this happens, your printer will automatically re-download the firmware. The time with which it would do this is based on the speed of your network. However, 2 hours should be enough for the download to get complete.Note: The solutions above apply to the following HP printer models: HP Deskjet 3630, HP Deskjet 3700, and HP envy 6000.To read more awesome articles, click any of the links below...HP Printer Offline [Issues & Solutions]How To Install HP Printer [Detailed Guide]HP Printer Black Ink [Issues & Solutions]HP Printer Blue Screen [How To Fix]HP Printer Printing Blank Pages [Solved]HP Printer Errors and Solutions [Detailed]Your HP Printer Copying Problems FixedHow to Fix HP Printer Flashing Blue LightYour HP printer is blinking blue light because it wants to get connected to your wireless network. [Reasons]The major reasons an HP printer flashes orange light are:1. The cartridge or toner has an issue.2. Corrupted or bad configuration settings.Ho to Fix HP Printer Flashing Orange Light Do the following solutions to fix your HP printer flashing orange light problem:1. Do a Power ResetHow to Do a Power Reset on an HP PrinterDo the following steps to power reset your HP printer:Step 1: Take the ink or toner cartridges out of the printer.Step 2: Ensure your printer is on, and then disconnect its power cable from the back of the machine.Step 3: Also, disconnect any cable connected to your printer, like USB cables and so on.Step 4: Let the printer stay this way for a couple of minutes.Step 5: Press the power key and hold on to it for some seconds.Step 6: Reconnect your power cord back to the printer. Ensure the cord is connected directly to a power outlet and not to a surge or extension socket.Step 7: The printer should come on automatically. But if it does not, turn it on by yourself.Step 8: Wait for some time for your printer to warm up and become idle. Now, check to see if the problem has been solved. If it hasn’t, proceed to the next solution.2. Check your CartridgesRemove the cartridges and see if any is faulty, leaking, or depleted. If this is the case, then you would have to replace the cartridge.How to Replace HP Printer Ink CartridgeDo the following to replace the ink cartridge on your HP printer:Step 1: Switch on the machine if it isn’t already turned on.Step 2: Load paper in the paper tray.Step 3: Open the cartridge access door, wait for some time so the carriage can go to the printer’s center.Step 4: Press the cartridge lightly so it would be released. Once it is released, pull it out from the slot.Step 5: Get the new cartridge and remove it from its packaging.Step 6: Remove the tape that is protecting the cartridge by pulling the pink tab on it. Make sure you don’t touch the ink nozzles and the contacts of the cartridge. Touching these parts can cause ink failure, poor electrical connections, and clogs.Step 7: Put the new ink in the slot. Ensure it snaps correctly in place.Step 8: If you have to change another ink, simply repeat steps 4-7.Step 9: After you are done replacing all the cartridges you wish to, close the access door.Step 10: After replacing the cartridges, you have to align them. Therefore, open your printer software from the PC your computer is connected to.Step 11: Once the software opens, select “Printer Actions”, next select “Maintenance Tasks”. Your HP Toolbox will open.Step 12: Now, select “Device Services”, click on “Align Ink Cartridges”. Your printer should automatically align the cartridges. It will also print out the alignment page.This toner cartridge below is compatible with the following HP LaserJet printer series M452 Series, M377dw, MFP 477 Series.Click Here to Buy Yours Now!3. Uninstall then Reinstall the Printer DriverHow to uninstall then reinstall an HP Printer DriverDo the steps below to uninstall then reinstall your HP printer driver:Step 1: Open Run by pressing the Windows Key and R together.Step 2: Type in “Control” then press “OK”.Step 3: Your Control Panel will open. From there, select “Hardware and Sound”, then “Printer and Devices”.Step 4: Select your printer driver. From the list of options, choose “Remove Device”.Step 5: Open run again (press your Windows Key and R together).Step 6: Now, type in “printui.exe/s”, then click on “OK”.Step 7: Your Printer Server Properties screen will be displayed. Now, click on your “Drivers” tab.Step 8: Choose every entry for the HP printer, select “Remove” then “Remove Driver Only”.Step 9: Restart your computer.Step 10: Once the system comes back on, go to your browser, go to the HP official page then download the current driver for your printer. After the download, follow the on-screen prompt to install the driver.You can read this detailed guide on how to install an HP printer.If your HP printer flashing orange light issue persists after you do all the above solutions, then contact HP Support for further assistance.How to Fix HP 940c Printer Flashing Orange LightYour HP 940c printer may be flashing an orange light if it has a defective print head or the ink cartridge is bad.Therefore, to solve the issue, follow the steps in the “How to Replace HP Printer Ink Cartridge” section of this article.If the problem persists afterward, then the print head may be defective. You would have to replace it in this case.How to Replace HP Printer Print HeadDo the following to replace the print head of your HP printer:Step 1: Load paper in the paper tray and ensure the printer is switched on.Step 2: Lift or open the printer’s cartridge door, then wait for some seconds for your carriage to go to the printer’s left side and become silent and idle.Step 3: Lift the carriage’s latch handle.Step 4: Remove the printhead by grasping the side and then lifting it towards you.Step 5: Get your new printhead then remove it from its plastic packaging. Make sure you don’t touch the print head nozzles or electrical contacts.Step 6: Insert your new printhead in the carriage. Simply hold it by the sides; the electrical contacts should be facing the printer’s rear.Step 7: Lower the carriage’s latch handle carefully.Step 8: HP advises that the cartridges that come with the printhead should be installed during its setup. This is to prevent startup failures.Step 9: So, take out the cartridges from the plastic packaging. Insert the cartridges one after the other in their respective slots. Ensure you hear them lock in place.Step 10: Close the printer’s cartridge door. Your printer should start the initialization process; this should take about 6 minutes. You may hear some noises during the process. Once the process is complete, your printer will automatically print the alignment page.The video below is a visual representation of the steps discussed.How to Fix HP Deskjet 2600 Printer Flashing Orange Light Your HP 2600 printer will flash orange light if the carriage gets stalled. Do the following to solve this problem:Step 1: Restart your printer.Step 2: Check if there is an issue with the hardware by printing the test report. Simply do the steps in the “Clear the Jam Manually” section of this article to clear the paper jam.After clearing any paper jam you find, check if the flashing triangle on your HP printer is no longer flashing.If it isn’t flashing, then the issue has been resolved. Therefore, you don’t have to continue with the troubleshooting solutions.However, if it is still flashing, then move to solution 5.Solution 5If the problem persists at this point, then you may have to reset the printer. Simply disconnect your printer’s power cord from the machine, wait a couple of minutes, now press the power button for about 15 seconds. Afterward, connect the power cable and switch on the printer if it doesn’t come on automatically.These solutions will fix the flashing orange triangle issue for the following HP Printer models: HP laserjet 1320n, HP laserjet p1606dn, HP laserjet p2035, and HP laserjet 1022.Why Is My HP Printer Flashing Yellow [Answer]Your HP printer blinking yellow light issue is often because one or more ink cartridges need attention. It is either the cartridge is installed incorrectly, damaged, missing, incompatible, or faulty.How to Fix HP Printer Blinking Yellow LightDo the following steps to fix your HP printer blinking yellow light issue:Step 1: Open the cartridge door to check the ink cartridge.Step 2: Remove each cartridge and visually inspect them to see if the chip is missing or faulty. Also, check to see if the ink has depleted.Step 3: If the ink cartridge is faulty, incompatible with your printer, or depleted, then you have to replace it. Follow the steps in the “How to Replace HP Printer Ink Cartridge” section of this article. After replacing the cartridge, go to step 5.Step 4: If the cartridges are still in good shape, then they were most likely not installed correctly. In this case, reinstall the cartridges but this time, ensure you do it correctly. Ensure they click in place as you install them.Step 5: Close the cartridge door and see if the printer is still flashing yellow light.Also, do these steps if your HP Tango printer is flashing yellow light and your HP Laserjet 1300 has flashing yellow light errors.Why Is My HP Printer Flashing Red [Solved]An HP printer may start flashing red due to the following reasons:1. The machine’s top cover is open.2. There is a paper jam error.3. A wrong paper type was fed.4. There’s no paper in the printer.How to Fix HP Sprocket Printer Flashing Red Light IssueDo the following solutions to fix your HP Sprocket printer blinking red light issue:Note: when the red light starts blinking, an error message often gets displayed as well. The solution you do should be based on what error message is being displayed.Solution 1 – Close the Top CoverEnsure the paper cover is properly closed and then try to print again.If the document prints, then the issue has been resolved. Hence, you don’t have to continue with the remaining solutions.However, if it doesn’t print, then you should try solution 2.Solution 2 – Load Paper in the MachineHow to Load HP Sprocket Printer PaperDo the following steps to load paper in your HP Sprocket printer:Step 1: Switch off the machine and open its paper cover.Step 2: Load 10 Sprocket photo papers and the colored Print Quality Card (used to be called Smartsheet). Ensure you load your colored card at the bottom of the whole stack. Also, make sure its barcode is facing down. The photo paper’s HP logos should also be facing down.Step 3: Once you are sure everything is properly loaded, close the paper cover. Send a print job to see if the issue has been resolved.If the document prints, then the issue has been resolved. Hence, you don’t have to continue with the remaining solutions.However, if it doesn’t print, then you should try solution 3.Click Here to Buy Yours Now!Solution 3 – Fix the Paper Jam ErrorHow to Fix HP Sprocket Printer Paper Jammed IssueDo the following to fix the paper jam error on your HP Sprocket printer:Step 1: Switch off the machine and open its paper cover.Step 2: Check your input tray and remove any loose photo paper you find. Also, ensure the photo paper’s condition is okay. Check the paper stack and remove any paper that is wrinkled, torn, or severely bent.Step 3: If you find any paper stuck inside the path, do not attempt to remove it. If you do, you may end up damaging the rollers.Step 4: Close the top cover and switch the Sprocket back on.Step 5: Wait for the machine to fall silent and become idle. Now, take out the photo paper that is fed via the machine’s output slot.Step 6: Open the top cover again and load photo papers in the Sprocket. If you aren’t sure of how to do this properly, refer to the second solution in this section.Step 7: Close the cover and try printing again.If the document prints, then the issue has been resolved. Hence, you don’t have to continue with the remaining solutions.However, if it doesn’t print, then you should try solution 4.Solution 4 – Ensure You Use the Right PaperHP Sprocket printers use Sprocket photo papers. If the paper that isn’t compatible with the printer is used, the printer will blink red light and would display an “Incorrect Paper Type” error message.To solve this problem, simply ensure the papers you use for your machine are compatible with it.What to Do If an Error Message Isn’t DisplayedIf your HP Sprocket printer is flashing red light with no error message, then you simply need to restart the printer.Restarting the printer will clear the error. Afterward, load the machine with Sprocket photo paper and try printing again.Check out this HP Sprocket printer if your sprocket printer is old and needs to be replaced...Click Here to Buy Yours Now!Why is the Power Light Flashing on My HP Printer [Reasons]An HP printer power light flashing issue could be due to any of the following errors:1. The printer’s cover is open.2. There is no paper in the printer.3. There is an issue with the cartridge.4. There is a paper jam error.5. The printer isn’t picking paper or labels correctly.The power light on the HP Printer may also blink at steady intervals if a print job is being processed.Note: When the power light starts blinking, an error message often gets displayed as well. The solution you do should be based on what error message is being displayed.How to Fix HP Printer Flashing Power LightDo the following solutions to fix the HP printer flashing power light issue:Solution 1 – Close the Printer’s CoverCheck to see if the machine’s cover is closed. If it isn’t, close it. if it is, open it and ensure you close it properly as the error may be because the cover wasn’t properly closed.Solution 2 – Load the Printer’s Paper TrayLoad the paper tray if the tray is empty. To do this properly, refer to the “How to Load HP Printer Paper Tray” section of this article and follow the instructions there.Solution 3 – Fix the Paper Jam ErrorDo the following fixes if your HP printer power button keeps flashing and is accompanied by a “Paper Jam” error:1. Manually remove the jamFollow the steps in the “Clear the Jam Manually” section of this article to do this.2. Clean the Printer’s Paper RollersHow to Clean HP Printer Paper RollersDo the steps below to clean your HP printer paper rollers:Step 1: Remove the machine’s power cable from the machine.Step 2: Remove the access door at the back. Simply press the tab by the side of the door and pull it out.Step 3: Get a lint-free piece of cloth and dampen it with distilled or bottled water. Squeeze the cloth to remove excess water from it.Step 4: Place the dampened cloth on the rollers and press it. Use your fingers to roll the rollers. You can apply more pressure (don’t use too much pressure) to clean off dirt or dust buildup.Step 5: Wait for some minutes (between 10-15 minutes) so the rollers can get dry.Step 6: Put the access door back in its place.Step 7: Plug the power cable back to the printer and turn it back on if it doesn’t come on automatically.Print a document to see if the issue has been resolved. If it hasn’t, do the next solution.3. Do a Power ResetHow to do a Power Reset on an HP PrinterDo the following steps to power reset your HP printer:Step 1: Ensure the printer is on, and then disconnect its power cord from the back of the machine.Step 2: Let the printer stay in this state for about 15 seconds.Step 3: Press the power key and hold on to it for some seconds.Step 4: Reconnect your power cord back to the printer. Ensure the cord is connected directly to a power outlet and not to a surge or extension socket.Step 5: The printer should come on automatically. But if it doesn’t, turn it on by yourself.If you do all of the above but the problem persists, then you need to service the product. Contact HP Support for more assistance.Solution 4 – Check the Print CartridgeYou may get any of the following error messages while your power button is flashing if the print cartridge is the cause of the error:1. “Incorrect Print Cartridge2. “Incompatible Print Cartridge”3. “Printer in back up mode”.Note: Ensure the print cartridge is compatible with your printer before you do the following solutions. If it isn’t, simply get a genuine HP print cartridge and replace the incompatible one.If it is compatible, do the following solutions:1. Determine the Faulty CartridgeDo the steps below to determine which print cartridge has the fault:Step 1: Open the print cartridge access door.Step 2: Remove one cartridge.Step 3: Close the access door and check if the error message is still being displayed.Step 4: If the error message is displayed, then the cartridge you removed isn’t the faulty cartridge. Put the cartridge back, remove another cartridge and see if the message is displayed or not. Do these steps until you find your problem cartridge.Step 5: Once the error message is no longer displayed after you remove a particular cartridge, then you have found your problem cartridge.Step 6: Now that you have your problem cartridge, you have to inspect it for the problem.Step 7: Check the cartridge for a tape, if found, remove it. Make sure you don’t take off the strip on top of the cartridge (the strip is often copper-colored).Step 8: Put the cartridge back in its spot. Ensure you properly insert it and hear it snap in place.Step 9: Close the cartridge door and then check to see if the problem has been resolved. If it hasn’t, do the next solution.2. Clean Your Problem CartridgeIf the steps above did not resolve the HP printer flashing power button error caused by a faulty cartridge, then you have to clean the faulty cartridge.How to Clean an HP Printer CartridgeDo the steps below to clean your HP printer cartridge:Step 1: You need the following things to do the cleaning:1. Distilled water. You can use filtered or bottled water if distilled water isn’t available. Avoid using tap water as it may have some contaminants that can potentially damage your cartridge.2. Cotton swaps. Soft clothes that won’t stick to your cartridge can also be used. Just make sure the cloth is lint-free.3. Paper towel or paper to place the cartridge on while you clean it.Step 2: Open your printer’s cover and wait for the carriage to get silent and idle.Step 3: Remove the power cable from the printer.Step 4: Take out the cartridge you want to clean and put it on your paper towel or paper. Ensure the cartridge’s nozzle plate is facing upward.Note: You need to be as quick as possible with the cleaning since the cartridge shouldn’t be outside the printer for longer than thirty minutes. Leaving it outside the printer for too long will cause the ink to dry up and possibly clog the cartridge’s nozzles.Step 5: Dip the cotton swab in your clean water then squeeze the swab to remove the extra water. You want the swab to be slightly damp and not wet.Step 6: Use the slightly damp swab to clean the contacts on the cartridge. Ensure you don’t touch the nozzles as you do this.Step 7: Take another cotton swab and dampen it. Do not forget to squeeze out the excess moisture again.Step 8: Clean the contacts inside the printer with the damp swab.Step 9: You can either let the printer sit for some minutes (maybe 10 to 15 minutes) so the place you cleaned can get dry. Or you may use a dry cotton swab to dry the area.Step 10: Put the cleaned cartridge back into the printer. Ensure it snaps into place.Step 11: Plug the power cable back into the printer and close its cover.Step 12: Check to see if the printer error has been resolved. If it hasn’t, then clean the cartridge again following the above steps. If the error persists after the second cleaning, then move to the next solution.3. Replace the CartridgeTo do this, follow the steps in the “How to Replace HP Printer Ink Cartridge” section of this article.If the problem persists after all these solutions have been done, then your printer needs to be serviced. In which case, contact a technician or HP Support for further assistance.Solution 5 – Change the Printer’s Print Mode SettingIf your HP printer power button is blinking and the printer isn’t picking paper or labels correctly, then you have to change its print mode setting.How to Change HP Printer Print Mode SettingDo the following to change your HP printer print mode setting:Step 1: From the document you tried to print before the error occurred, click on “File” then “Print”.Step 2: From the dialog box that comes up, select “Properties” then “Options”, “Printer Setup”, “Printer”. For some programs, you may simply need to click on “Preferences”.Step 3: Select the “Paper/Quality” or “Features” tab. Again, this may vary based on your software program.Step 4: Choose the size that is the same as the size of the paper in the printer paper tray.Step 5: Also choose the paper type that is the same as the paper type in the printer paper tray.Step 6: Click on “OK”, click on “OK” again. The document should print now.However, if it doesn’t and the error remains unresolved, then you can use another label’s brand. If the problem persists afterward, then you can either have the printer replaced or serviced depending on which would be a better option for you.HP Printer Lights Flashing Rapidly [Reason & Solution]Your HP printer lights will flash rapidly if the cartridge door is open. So, to stop your HP printer lights from flashing rapidly, you have to close the cartridge door properly.HP Printer Flashing Colored Lights [Reasons]This section focuses on reasons HP Deskjet, Envy, Officejet, and Laser printers are flashing colored lights. These reasons address the following models: HP Deskjet 1010, HP Deskjet 1050, HP Deskjet 1512, HP Deskjet 3636, HP Deskjet 460, HP Deskjet 6940, HP 8100, HP 9800, HP Officejet 100 mobile printer, and HP h470.HP Printer Flashing Purple [Reasons]Your HP printer will flash a purple light on the printer’s bar when it’s in Wi-Fi setup mode. The purple light can blink at different places on the printer’s bar.When the light goes from the center of the bar to the edges of the bar: the machine is in Auto Wireless Connect mode. In this case, it is also waiting to be connected to either your mobile phone or computer.When the light glows in the center alone: the machine is in Auto Wireless Connect mode and waiting to get the password imputed in your HP Smart app. If you do not provide the password in 3 minutes, the state would expire and you will have to reconnect the device.When the edges of the bar pulse purple light repeatedly while the wireless light also blinks: the printer is processing a connection with a wireless network via WPS Push Button.HP Printer Flashing Green Light [Reasons]An HP Deskjet or laser printer will flash green light on its bar if is turning off or on or if it is doing an operation. Some of these operations are if the printer is doing a cleaning routine, installing or downloading an update, cooling down, and waiting for a confirmation.If you were printing when the printer starts cooling down, then the print job may be paused. This may take some minutes.You don’t have to do anything when your HP printer starts blinking green light. You simply need to wait for a couple of minutes for it to finish the operation.These reasons also apply to the following: HP Deskjet d1560, HP laserjet printer flashing green light, HP Deskjet 1000, and HP laserjet 1320.HP Envy Printer Flashing White Light [Reason]Your HP Envy printer will flash white light on the bar if the machine is idle and isn’t connected to any network. In which case, you would have to connect your printer to a network if you wish to print wirelessly.How to Fix HP Printer Blinking Blue ScreenYour HP printer flashing blue screen may be due to the following reasons:1. Overheating.2. The router connected to the printer has outdated firmware.3. Missing drivers.We already have a detailed article for this printer problem. Therefore, read this to get detailed instructions on how to solve this problem.How to Fix HP Printer Flashing b305dff1 Do the following solutions to solve your HP printer flashing b305dff1 error:1. Update Your Printer’s FirmwareYou can update your printer’s firmware in 3 ways. The steps for each method are detailed below.How to Update HP Printer FirmwareDo the steps below to update your HP printer firmware:Via HP Smart APPStep 1: Open the app on your device and then either log in or create a new account if you don’t already have one. If you don’t have the app, you can download it from the app store.Step 2: Choose your printer image or name from the home screen.Step 3: Under the “Advanced” tab, choose Printer Home Page (EWS) or Advanced Settings.Step 4: Choose Web Services or Tools.Step 5: Click on Product Update or Printer Updates, then click on Check Now.The firmware update will automatically download and get installed on your printer.Via HP WebsiteStep 1: Ensure the printer is switched in and properly connected to the computer.Step 2: From the computer browser, open HP’s official website and navigate to their “Software and Driver Downloads” page. Then, type in the model of your printer.Step 3: A list will come up, select “Firmware” from this list. Click on the “Download” button beside the update.Note: If there is no firmware option, then your printer doesn’t have any firmware updates.Windows Step 4: Check the update screen for your printer’s status. If it is “Ready”, then click the box beside the number and click “Update”. If it is “Up-to-Date”, then you have the current firmware.Mac Step 4: On the Updater screen, choose your printer name, and then click on “Continue”. Your firmware is up-to-date if there’s no available upgrade.Via the PrinterStep 1: Ensure the printer is connected wirelessly to the internet or at least with an Ethernet cable. A USB connection won’t work for the upgrade.Step 2: Switch on the printer and press or touch the HP ePrint button or icon. Choose “Setup” or “Settings”, and then choose the option for updating the firmware.Step 3: If your printer doesn’t have the HP ePrint button or icon, then do the following: from “Settings” or “Setup” menu, select “Printer Maintenance”, “Preferences” or “Tools”. Then select “Printer Update”, “Web Services” or “LaserJet Update”.Step 4: If the terms of service prompt come up, accept it then do the on-screen prompts to switch the Web Services on. After which, automatic updates will be set up.Step 5: If your printer doesn’t automatically search for updates, then press “Check for Updates”.Note: Never switch off your printer during the upgrade. Doing this may damage the printer permanently.2. Remove the Printer’s Ink Cartridges and then Reset the MachineDo the following steps to do this:Step 1: Open the printer’s cartridge access door and take out cartridges.Step 2: Ensure the printer is switched on, and then remove the printer’s power cord out of the printer. Also, remove the cord from the power supply.Step 3: Wait for at least a minute.Step 4: Plug the power cord back in the printer and the power supply.Step 5: Switch the printer back on.Step 6: Install the cartridges back in the printer and close the access door.Step 7: You may get a prompt asking you to print either an alignment or calibration page. If you do, then go ahead and do this.If your printer keeps flashing b305dff1, then do the next solution.3. Service The MachineAt this point, you need the help of a technician to figure out the cause of the problem. Sometimes, it may be due to a hardware problem.So, if your product is still within warranty, contact HP Support for further assistance. You can still contact HP for servicing of the product even if its warranty has expired. However, keep in mind that this would cost you a fee.How to Fix HP Printer Flashing b305dff9Do a power reset if your HP printer is flashing the error code b305dff9. Refer to the “How to do a power reset on an HP printer” section of this article for detailed steps to do this.If the problem persists after the reset, then update your printer’s firmware. Refer to the “How to Update HP Printer Firmware” section of this article to do this.The solutions discussed here will also fix the HP printer information button flashing issue.How to Fix HP Printer Flashing Ink Light Do the following steps to solve your HP printer blinking ink light issue:Step 1- Ensure the Ink Cartridge in the Printer are Compatible with the PrinterAccording to HP, only the use of genuine HP toner and ink cartridges are recommended. HP doesn’t guarantee the reliability or quality of 3rd party cartridges.You can visit HP anti-counterfeit page to check your cartridges’ authenticity. If the cartridge isn’t compatible, go to step 7 “Replace your ink cartridge”. If it is compatible, go to step 2.The original HP ink cartridges below are compatible with the following HP printers: OfficeJet 8702, OfficeJet Pro 7720, 7740, 8210, 8710, 8720, 8730, 8740 SeriesClick Here to Buy Yours Now!Step 2 – Remove the Ink Cartridges, Inspect, and Reinstall ThemIf your cartridges aren’t properly installed, then the ink light may keep flashing. In this case, you need to properly install the cartridge to fix the problem.How to Uninstall and Reinstall an HP Printer Ink CartridgeDo the steps below to uninstall and reinstall your HP printer ink cartridge:Step 1: Switch on the printer if it wasn’t already on.Step 2: Pull the output tray down.Step 3: Lower or open the cartridge door. When you do, the carriage will move to the printer’s center.Step 4: Wait for the printer to get silent and idle.Step 5: Press the cartridge down lightly, this would release it. Now, pull out the cartridge from its slot.Step 6: Make sure you don’t touch the cartridge’s ink nozzles or contacts. Doing this may cause ink failure, poor electrical connections, and clogs.Step 7: Check to see if a protective tape is still on the cartridge’s nozzles. If there is, remove the tape.Step 8: Reinsert the cartridge in the slot. Simply hold it by the sides and put its nozzles first into the printer. Ensure the cartridge snaps in its place.Step 9: Do steps 5 to 8 for the other cartridge then close the access door. Do step 3 below if the problem persists.Step 3 – Check and Clean the Cartridge’s Electrical ContactsHow to Clean HP Printer Ink Cartridge Electrical ContactsDo the following to clean your HP printer cartridge electrical contacts:You would need the following items:1. Distilled water. You can use filtered or bottled water if distilled water isn’t available. Avoid using tap water as it may have some contaminants that can potentially damage your cartridge.2. Foam-rubber swaps. Soft clothes that won’t stick to your cartridge can also be used. Just make sure the cloth is lint-free.Also, avoid the use of alcohol or platen cleaners as using this can damage the cartridge and even the printer.Step 1: Switch on the printer if it wasn’t already on.Step 2: Pull the output tray down.Step 3: Lower or open the cartridge door. When you do, the carriage will move to the printer’s center.Step 4: Wait for the printer to get silent and idle.Step 5: Remove the power cord from the printer. Also, unplug other cables attached to the printer like USB cables and such.Step 6: Press the cartridge down lightly, this would release it. Now, pull out the cartridge from its slot.Note: Don’t take the two cartridges out of the printer simultaneously. Instead, take out one, clean the contacts, and then reinstall it before you take out the second one to clean it. Also, ensure the cartridge doesn’t stay outside the machine for longer than thirty minutes.Step 7: Check the removed cartridge contacts for debris and ink buildup. Use a dry cotton swab to clean off the debris from the contact. Ensure you wipe just the contacts and do not spread debris or ink on other parts of the cartridge.Step 8: Now, dip a swab in your distilled water. Ensure your squeeze the swab properly to remove excess water.Step 9: Clean the contacts. Ensure this is the only part you clean.Step 10: Allow the cartridge to sit for about 10 minutes so it can dry off. You can also use a dry swab to clean it dry.Step 11: Dip another swab in water and again squeeze the excess water out.Step 12: Now, use the moist swab to clean the contacts inside the machine (the carriage).Step 13: Reinstall the cartridge and ensure it locks properly in place.Step 14: Do these steps again for the second cartridge to clean it.Step 15: Close the access door.Step 16: Plug the USB cable (if any was removed) and power cord back in the printer.Step 17: Switch the printer on and see if the problem has been solved. If it persists, then continue troubleshooting with the step below.Step 4 – Uninstall and Reinstall the Cartridges AgainRepeat the instructions in step 2 “Remove the Ink Cartridges, Inspect, and Reinstall them” to uninstall and reinstall the cartridges again.Step 5 – Check and Clean the Electrical Contacts AgainIf the problem persists, cleaning the electrical contacts again may help solve the problem. Simply do the instructions again in step 3 to clean the contacts again.Step 6 – Power Reset Your PrinterTo power reset your printer, follow the steps in the “how to do a power reset on an HP printer” section of this document.If the problem persists when the printer comes back on, then do the next fix.Step 7 – Change the CartridgeYou may need to replace either one or the two cartridges. Whichever it is, ensure you use only HP genuine cartridge for the replacement.Do the steps in the “How to Replace HP Printer Ink Cartridge” section of this read to replace your ink cartridge.Step 8 – Call a TechnicianIf your HP printer ink light keeps flashing at this point, then your printer needs to be serviced. In this case, you would have to call a technician or contact HP Support for further assistance.Note: These steps apply to these HP printer issues and models: HP printer cartridge blinking, HP printer black ink flashing, HP 8100, HP Deskjet 5150, and HP Deskjet 6940.How To Solve HP Printer Flashing EnvelopeDo these steps to solve your HP printer flashing envelope issue:Step 1: Open the printer’s cartridge door and wait until the carriage becomes idle. Then, take out the cartridges from the printer.Step 2: Open your HP Instant Ink page and sign in with your account details.Step 3: The account page would come up.Step 4: On the account page, select “Billing Information” and then click on “Edit Payment Information”.Step 5: Correct the information, reinstall the cartridges, and check if the problem has been resolved.The steps above will fix the flashing envelope issue for HP Deskjet 2600 and HP Deskjet 3630.HP Printer Exclamation Mark Flashing [Reasons & Solutions]The following are some of the reasons for your HP printer exclamation mark flashing issues and solutions to the problems:1. The Power is InsufficientThis is often the case when the printer power cord is plugged into a power strip or surge protector. To solve this problem, simply connect the cord directly to a wall outlet.2. The Printer Has a Paper Jam IssueIf the power isn’t the issue, then a paper jam may be the cause. Therefore, do the steps in the “Clear the Jam Manually” section of this article to check for and remove any jammed paper in the machine.3. The Printer’s Top Cover wasn’t properly closed or is OpenDo the following to solve this issue:Step 1: Open the printer’s top cover.Step 2: Ensure your print cartridge is properly seated. If necessary, remove and then reseat it.Step: Close the printer’s top cover and make sure it closes properly.4. The Paper Tray Wasn’t Loaded properly or is Empty.If this is the case, then you have to load the tray or reload it as the case may be to fix the issue. For proper instructions on how to properly load your HP printer tray 2, follow the steps in this article’s “How to Load HP Printer Paper Tray” section.If the issue persists after all these issues have been addressed, then you have to cold reset the machine.How to Cold Reset an HP PrinterDo the steps below to cold reset your HP printer:Step 1: Switch off the machine.Step 2: Press the “GO” button and hold on to it for a while.Step 3: Switch the machine back on and keep holding the “GO” button for a minimum of 5 seconds. You can hold the button for longer but it shouldn’t exceed 15 seconds.Step 4: While you are holding the button, the “Attention” light should come on.Note: If the “Ready” light comes on as well as the “Attention” light, then the procedure for the cold reset has to be started all over.Step 5: When the “Attention” light comes on, the process will commence. The printer will go back to the “Ready” state once the cold reset is complete.If you have the flashing exclamation on your HP Deskjet 2540, the solutions above should resolve the issue.HP Printer Wireless Icon Flashing [Solved]Do the following if the wireless light on your HP printer is flashing:1. Wait For Your Printer To Connect to a NetworkMost times, when your HP printer’s Wi-Fi light keeps flashing it means the machine wants to connect to a network. So, wait for some minutes to see if a connection will be established.If a connection is established, then the light will stop blinking and don’t have to keep troubleshooting. But if no connection is made, then do the steps below.2. Check The FollowingBelow are some factors that can prevent your printer from connecting to your wireless network. So, to fix the issue, you have to rectify these factors:1. Your network isn’t active anymore, or its signal is low: Simply check your router to ensure it is still active.2. The router is either too close to the printer or too far from it: Check the location of your router and ensure it is in the right proximity to your printer. The distance between both devices should be between 3 to 5 ft (1.0 to 1.5 meters).3. Your Printer has gone into standby or sleep mode4. A Device Nearby is Emitting Radio Signals: Some devices like a cordless telephone or microwave may be emitting radio signals that are interfering with your wireless network connection. To solve this, simply check for and turn off or shift away the device causing the interference.If your printer connects to your network after you checked and corrected the items above, then the issue has been solved. In which case, stop troubleshooting. However, if the problem persists, go to the next step.3. Setup the Printer Wireless NetworkHow to Setup HP Printer Wireless NetworkDo these steps to set up your HP printer wireless network:Step 1: Restore the printer’s default network settings.Touchscreen Printers: From the printer’s Setup or Wireless menu, choose Settings or Network Setup, then Restore Network Settings.Inkjet Printers that Don’t Have a Touchscreen: Press the Cancel and Wireless buttons simultaneously and hold on to them until the light of the power key flashes. The wireless light should flash as well.Laser Printers that Don’t Have a Control Panel Menu or Touchscreen: Press the Wireless Button until the Power and Attention lights flash. Or, press both the Cancel and Wireless buttons. The machine’s Wireless light will flash and it might restart.Laser Printers that Don’t Have a Touchscreen: Press the Wireless key and hold on to it till the printer’s Attention light blinks. The wireless light should flash as well.Tango Printers, Deskjet Plus IA 6400, 6000, and Envy 6400e, 6000e, 6000: Press the Wireless key and hold on to it for about 5 seconds. The Status light should flash (based on the printer model, this may be a purple or blue light).Step 2: If you don’t already have the HP Smart App, then go to the Mac App Store or Microsoft Store and download the app to your mobile device or computer.Step 3: If you haven’t used the app before, then you have to sign in or create an account so you can access every function. Simply follow the onscreen instructions to do this.Step 4: Run the app and click on the + sign or “Add Printer” option. The app will start searching for your printer.Step 5: To finish the setup, simply follow the onscreen instructions.Also, ensure the following are done:1. The mobile device or computer and printer are close enough to the router.2. Switch on the mobile device or computer Wi-Fi and connect it to the Wi-Fi network. If you are already using an Ethernet connection for the computer, unplug the cable and do the setup via a Wi-Fi connection.3. You need to enable the location service on your mobile device after installing the HP Smart App on the device. Also, give permission HP Smart to use your device’s location. This is what will enable the app to detect your printer during the setup.4. Also ensure the mobile device’s or computer’s Bluetooth is enabled.If the problem persists after you do all of the following, then the printer may have to be serviced. Contact HP or any technician for further assistance.HP Printer Resume Light Keeps Flashing [Why & Solution]The following are the reasons your HP printer Resume light keeps flashing and how to solve them:1. There’s no paper in the paper tray: Simply load paper in the paper tray and then press the printer’s Resume button. If you aren’t sure how to properly load the tray, then follow the steps in the “How to Load HP Printer Paper Tray” section of this article.2. There’s a Paper Jam in the Printer: to solve the issue, remove the paper jam. Follow the steps in the “Clear the Jam Manually” section of this article to do this.HP Printer Solution Center Flash Player Error [Reason & Solution]Printers produced before 2010 have a management program known as HP Solution Center. For this program to work, the system must have active Flash software. However, Flash isn’t supported anymore; this is why you have the HP printer Solution Center Flash error.Luckily, you can keep printing and scanning even if your HP printer needs a flash player via the following:Print Via Windows Built-in DriverHow to Use Windows Built-in DriverDo the following to use Windows built-in driver for your printer in place of HP printer software flash player:Step 1: Search for “Change Device Installation Settings” from Windows. Also, ensure you check “Yes (recommended)”.Step 2: Ensure the computer and printer are close enough to your Wi-Fi router.Step 3: Connect your printer and computer to one network.For Touchscreen Printers: Open Wireless Settings, Network, or Setup. Then, choose Wireless Setup Wizard. Follow the onscreen prompts to choose your network and then type in the password.For Printers That Doesn’t Have Touchscreen: Press the Wireless key and hold on to it for about 5 seconds. The wireless light should start flashing. Now, press the WPS button and hold on to it for the connection process to start. Ensure you do this within 2 minutes. The wireless light will stop blinking once the connection is complete.HP Tango Deskjet 6400 and 6000, and ENVY 6400 and 6000 Printers: Press the Wi-Fi and Power buttons and hold on to them for about 5 seconds. The blue bar will flash. Now, press the WPS button and hold on to it for the connection process to start. Ensure you do this within 2 minutes. The blue bar will stop blinking once the connection is complete.Ethernet (Wired) Connection: Connect the Ethernet cable to your printer’s Ethernet port and then to your access point or router’s port. The light beside the printer’s port would be steady while the activity light will start blinking.Step 4: Search for “Add a Printer or Scanner” from Windows and run it.Step 5: Click on “Add a Printer or Scanner”. Windows will search for available printers. Once the list of available printers comes up, select your printer by clicking on it then clicking on “Add Device”.If the printer you want isn’t among the list of available printers, then click on “The printer that I want isn’t listed”. A “Find a printer by other options” screen will come up. Choose an option among them to add your printer.USB-Connected PrintersYou can also add your USB-connected printer with the following stepsStep 1: Search for

“Change Device Installation Settings” from Windows. Also, ensure you check “Yes (recommended)”.Step 2: Ensure your computer has an available USB. Also, don’t connect your printer to any docking station or USB hub. If you do this, the machine may not operate properly due to insufficient power.Step 3: Switch the printer and connect your USB cable to your computer and printer.Step 4: The message “Found new hardware” will be displayed. Follow the on-screen instructions to install your printer. If you can now print, then the driver has been successfully installed. If you can’t, then do the steps below to complete the setup.Step 5: Search for “Add a Printer or Scanner” from Windows and run it.Step 6: Click on “Add a Printer or Scanner”. Windows will search for available printers. Once the list of available printers comes up, select your printer by clicking on it then clicking on “Add Device”.Step 7: If the printer you want isn’t among the list of available printers, then click on “The printer that I want isn’t listed”.Step 8: A “Find a printer by other options” screen will come up. Choose “Add a local printer or network printer with manual settings” then click on “Next”.Step 9: A new window “Choose a printer port” will come up. Choose “Use an existing port” in this window then choose USB001: (Virtual printer port for USB), then click on “Next”.Step 10: Do the on-screen commands to install your printer’s model driver.Scan Via Any Of the Following Scanning AppsUse any of the following scanning apps to scan on your HP printer with Solution Center Flash error:1. Windows Scan App: Most all-in-one HP printers can scan via this app. To use it simply search for “Scan” on Windows. Click on the “Scan App” from the result list to run the app.2. Windows Fax and Scan: This is a pre-installed tool and can be used to scan documents and photos. To use it, search for “Fax” on Windows, then click on “Windows Fax and Scan” from the result list to run the tool. When it opens, click on “New Scan”.3. HP Scan and Capture App: This app is free and can be downloaded from your Microsoft Store. You can use the app to scan documents and photos.How to Use HP Scan and Capture AppFollow these instructions to use the HP Scan and Capture App:Step 1: Switch on your printer and then put plain paper in the printer’s input tray. Also, ensure the toner or ink cartridges are properly installed.Step 2: Put the document to be scanned in the ADF (automatic document feeder) or your scanner glass.Step 3: On the computer, install the HP Scan and Capture app from Microsoft Store.Step 4: Once the installation is complete, launch the app by clicking on “Launch”.Step 5: Click on the menu icon and then choose “Settings”.Step 6: Click on “Select Device” and then choose your printer.Step 7: Click either “Photo Scan Options” or “Document Scan Options” based on what you want to scan, so you can change the settings you wish to. When you are down, click on the arrow to take you back.Step 8: Click on any space outside your “Settings” menu and then click on “Capture Photos” or “Capture Documents”.Step 9: Click on the icon for saving once the scan is complete.You should be able to print and scan with your printer despite the HP printer flash problem with the steps above. However, if you can’t, contact HP Support for further assistance.Or you can get one of the newer models of HP printers to avoid this problem. Check out this wonderful HP laser printer below…Click Here to Buy Yours Now!How to Fix HP Printer Unknown USB Flash Drive Error Do the following solutions if you’re experiencing an HP printer USB flash drive error:1. Restart Your ComputerYour computer may be having an error and that is why the flash drive is not being recognized. So, simply click on your Start Menu and click on “Shut down”. Wait for about 2 minutes and turn the system back on.If the USB is now recognized, then the issue has been solved. If it isn’t, continue troubleshooting.2. Plug the Flash Drive in another PortThe problem may be due to a faulty port. Therefore, unplug the USB device from the port it is connected to and plug it in another port.If the problem is solved, then the USB port is faulty. You can either choose to have the faulty port fixed or you can simply keep using other ports.3. Connect the USB Device to another ComputerYour device may be faulty and could be causing the error. This can be confirmed by trying the device on another PC. If you still get the error on another computer, then your USB device is faulty and may have physical damage and can’t be used anymore.If this is the case, you need a new USB flash drive. Check out this 1TB USB flash drive below:Click Here to Buy Yours Now!4. Connect another USB Device to the ComputerIf the USB reflects in another system, then your PC may be the cause of the issue. To confirm this, plug another USB device into the computer. If you get the error message when you do, then your printer is the cause of the issue.In this case, you can do the subsequent solutions to solve the issue.5. Update WindowsHow to Update WindowsDo the following to update Windows:Step 1: Click on the Start button.Step 2: Now click on the Settings icon.Step 3: Select “Updates and Security” from the options.Step 4: Now click on “Windows Update”.Step 5: Finally, select “Check for Updates”.If there is an update, your system will ask for the right to install it. When you agree, the update will be installed automatically.6. Update DriversHow to Update Windows DriverDo these steps to update your PC drivers:Step 1: Simultaneously push the R and Windows keys.Step 2: When the “Run” dialogue box comes up, type in “devmgmt.msc” and then, click on “OK”. This will open the device manager.Step 3: Search the list for “Universal Serial Bus Controller”. It is often the last on the list. Expand it by clicking the plus sign beside it.Step 4: Search for and select the list for your USB device. An exclamation mark may be beside it.Step 5: Now, choose “Update driver software”, then select “Browse my computer for driver software”, also select “Let me pick from a list of available drivers on my computer”.Step 6: Select “Generic USB Hub” and then click on “Next”.The update will start automatically and you would get a prompt once it is complete. Check to see if the problem has been solved. If it has, you don’t have to keep troubleshooting. But if it hasn’t, do the next solution.7. Adjust the Root Hub SettingsHow to Adjust Root Hub SettingsFollow these steps to adjust your root hub settings:Step 1: Simultaneously push the R and Windows keys.Step 2: When the “Run” dialogue box comes up, type in “devmgmt.msc” and then, click on “OK”. This will open the device manager.Step 3: Search the list for “Universal Serial Bus Controller”. It is often at the last on the list. Expand it by clicking the plus sign beside it.Step 4: Search for and select “USB Root Hub” by right-clicking it.Step 5: Choose “Properties”. This would open another window.Step 6: From the new window, click on the tab “Power Management”.Step 7: Look for “Allow the computer to turn off this device to save power”. If it is checked, then click on it to uncheck it.Step 8: Save the changes by clicking “OK”. Repeat the steps for every Root Hub.Note: You may have to restart the PC for the changes to become effective.8. Turn off Fast StartupHow to Turn off Fast Startup on WindowsDo these steps to switch off fast startup on your Windows PC:Step 1: Run “Control Panel”. You can either ask Cortana to run it or search for it in your Start Menu.Step 2: Search for and select “Hardware and Sound”.Step 3: Choose “Power Options”.Step 4: Check for “Choose what the power button does”.Step 5: Now, click on “Change settings that are currently available”.Step 6: Look for “Turn on fast startup”. If it is checked, then click on it to uncheck and switch it off.Step 7: To save the changes, click on “Save” and then close the window.Check to see if the problem has been fixed. If it hasn’t, then contact a technician for further assistance.How to Prevent HP Printer USB Flash Drive ErrorBefore you remove any USB device, ensure you “Eject” it to prevent the reoccurrence of this problemHow to Eject a USB DeviceDo the following to eject your USB device before removing it:Step 1: Right-click the USB sign you’d find in your icon tray.Step 2: Select “Eject”. This would tell your system that you no longer want to be connected to the device.Step 3: Wait until you get a prompt telling you that you can now safely remove the USB device. When you do, then you can take out the device.Note: If you don’t get the prompt telling you that the device can now be safely removed, do not remove it. Instead, close your folders, windows, and programs as they may still be using the device. Afterward, try ejecting it again. If it works, good, if it doesn’t then you may need to restart the computer.Ensure the USB device is still in the device when you restart it. Try ejecting the device again after the system comes back on.How to Fix HP Printer Hourglass BlinkingIf your HP printer is blinking an hourglass symbol, then press the Cancel key to cancel any pending print job. When the job gets canceled, turn off the printer, wait for some seconds, and turn it back on.The hourglass is often an indication of a queued print job. If the file isn’t printed, the blinking hourglass won’t go away.If canceling the job and resetting the printer doesn’t fix the issue, then contact HP for further support.How To Use HP Printer Scan to Flash Drive FeatureDo the following to scan to flash drive on your HP printer:Step 1: Load the document feeder or scanner glass with the document based on the printer’s indicators.Step 2: Plug in your flash drive in the walk-up USB port.Step 3: A menu “USB Flash Drive” will come up.Step 4: Search through the menu’s options to find the “Scan to USB Drive” option and then select it.Step 5: Adjust the necessary setting once your summary screen comes up.Step 6: Press the Scan key. This would save and then scan the file.On your USB drive, a folder called “HPSCANS” will be created automatically by your printer. It is in this folder the document will be saved in either a JPG or PDF format. The file name will equally be automatically generated by the printer.How to Fix HP Laserjet P1606dn Flashing Toner Light Do the following solutions to fix your HP Laserjet P1606dn flashing toner light:Solution 1: Ensure Packing Material Isn’t Inside the PrinterDo these steps to check inside the printer for packing material and remove them if any is found:Step 1: Open the cartridge access door.Step 2: Lift the paper packing. However, don’t remove it.Step 3: Remove the packing material.Step 4: Now, take the print cartridge out of the printer.Step 5: Take the packing material out of the product.Step 6: Check the cartridge end and take off the clip you’ll find there. The clip should be orange in color.Step 7: Rock the cartridge forth and back gently. This is to ensure the toner is evenly distributed.Step 8: Remove the sealing tape on the cartridge. To do this, check the cartridge’s left side, you will find a tab there; bend it till it breaks loose. Now, pull it to take off the sealing tape.Step 9: Install the cartridge back into the printer and properly close the access door.Check to see if the toner light is still blinking. If it isn’t, then the problem has been solved. Continue troubleshooting if it is.Solution 2: Replace the Print CartridgeHow to Replace HP Printer Toner CartridgeFollow the steps below to replace your HP Printer Toner CartridgeStep 1: Open the cartridge access door.Step 2: Remove the depleted or faulty cartridge out of the printer.Step 3: Take the new cartridge out of its package. Put the old cartridge in the box so it can be recycled. Also, ensure you hold the cartridge on each end rather than touching the roller surface or shutter. Doing this can damage the cartridge.Step 4: Rock the cartridge forth and back gently. This is to ensure the toner is evenly distributed.Step 5: Check the cartridge’s left side, you will find a tab there; bend it till it breaks loose. Now, pull it to take off the sealing tape. Put the tape and tab in the box so they can also be recycled.Step 6: Put the new cartridge in the printer and ensure it locks properly in place. Close the cartridge door once the cartridge is properly installed.If the toner light is still blinking at this point, then contact HP Support for further assistance as the product may need to be serviced.If your machine is old and you would rather have it replaced than serviced, then you can check out this HP laser printer below:How to Fix HP Deskjet 6540 Flashing Arrow Do the following to fix your HP Deskjet 6540 flashing arrow and power light:Step 1: Remove the papers from the paper tray and also take out your cartridges.Step 2: Unplug the printer’s power cord from both the power source and the printer.Step 3: Slide your carriage from the right to the left with your hands. Also, use your fingers to roll the printer’s rollers from the back.Step 4: If rollers won’t roll, or the carriage won’t slide, hold down your power key for about 60 seconds. Repeat step 3 afterward.Step 5: Check the removed cartridge contacts for debris and ink buildup. Use a dry cotton swab to clean off the debris from the contact. Ensure you wipe just the contacts and do not spread debris or ink on other parts of the cartridge.Step 6: Now, dip a swab in your distilled water. Ensure your squeeze the swab properly to remove excess water.Step 7: Clean the contacts. Ensure this is the only part you clean.Step 8: Allow the cartridge to sit for about 10 minutes so it can dry off. You can also use a dry swab to clean it dry.Step 9: Now, close the cartridge door, but do not reinstall the cartridge.Step 10: Plug the power cord back in the printer and power source.Step 11: Put in any of the cartridges (only one), in their respective spot. Close the access door and check if the lights are still blinking.Step 12: Remove the first cartridge you installed and install the second one. Also, check if the lights are still blinking.If the light stopped blinking when you installed one of the cartridges, then the cartridge is okay. If the light continues blinking for one cartridge, while it stopped blinking when you installed the other, then the installed cartridge is faulty and has to be replaced.Also, if the light doesn’t stop blinking when you installed the two cartridges, then both of them may be bad. In which case, you would need to have them replaced.If replacing the cartridges doesn’t solve the issue, then your printer may need to be serviced. Contact HP Support for further assistance in this case.
